## List of figures

---

|                                                           |    |
|-----------------------------------------------------------|----|
| Figure 1                                                  |    |
| AC-powered system .....                                   | 7  |
| Figure 2                                                  |    |
| AC-powered system with reserve power .....                | 8  |
| Figure 3                                                  |    |
| DC-powered system .....                                   | 9  |
| Figure 4                                                  |    |
| DC-powered system with reserve power .....                | 10 |
| Figure 5                                                  |    |
| Single point ground .....                                 | 12 |
| Figure 6                                                  |    |
| AC power—single-column distribution .....                 | 15 |
| Figure 7                                                  |    |
| AC power—multiple-column distribution .....               | 16 |
| Figure 8                                                  |    |
| AC power—multiple-row distribution .....                  | 17 |
| Figure 9                                                  |    |
| AC power—upgraded system distribution .....               | 18 |
| Figure 10                                                 |    |
| Three terminal testing .....                              | 21 |
| Figure 11                                                 |    |
| AC internal power distribution (rear of the column) ..... | 25 |
| Figure 12                                                 |    |
| DC internal power distribution (rear of the column) ..... | 31 |

|                                                                                                        |    |
|--------------------------------------------------------------------------------------------------------|----|
| Figure 13                                                                                              |    |
| NT7D12 Rectifier Rack Assembly with three NT0R72 rectifiers . . . .                                    | 39 |
| Figure 14                                                                                              |    |
| QBL15 Power Distribution Box . . . . .                                                                 | 40 |
| Figure 15                                                                                              |    |
| AC reserve power configuration . . . . .                                                               | 45 |
| Figure 16                                                                                              |    |
| MFA150 Modular Power System with six MPR25 rectifiers . . . . .                                        | 55 |
| Figure 17                                                                                              |    |
| QCA13 Main Power Cabinet Assembly . . . . .                                                            | 69 |
| Figure 18                                                                                              |    |
| QBL12 Power Distribution Box . . . . .                                                                 | 73 |
| Figure 19                                                                                              |    |
| NT6D82 power bay configuration with three RL100F50 rectifiers . .                                      | 75 |
| Figure 20                                                                                              |    |
| DC power—multiple-column distribution with MFA150 Modular Power System . . . . .                       | 79 |
| Figure 21                                                                                              |    |
| DC power—multiple-column distribution with System 600/48 Power Plant 80                                |    |
| Figure 22                                                                                              |    |
| DC power—multiple-column distribution with NT6D82 Power System                                         | 81 |
| Figure 23                                                                                              |    |
| DC power—multiple-column distribution with QBL12 and customer power 82                                 |    |
| Figure 24                                                                                              |    |
| DC power—multiple-column distribution with NT0R72 rectifier and QBL15 Power Distribution Box . . . . . | 83 |
| Figure 25                                                                                              |    |
| DC power—multiple-column distribution with J2412 Power Plant . .                                       | 84 |
| Figure 26                                                                                              |    |
| DC power—example of upgraded system distribution . . . . .                                             | 85 |
